

Digicraft at Udevelop is proud to introduce online ordering for digital press products. This is a special service for JPEG's only. Below are some additional instructions to be noted.

1. When starting your order, the price for a single product will be on your screen during the designing of your product. The next stage will allow you to enter a quantity for your product and have a price listing posted. Substantial discounts are available when ordering in quantities as low as 10 on cards for example.
2. We have many templates available for you to use (with more coming soon), but you also have the option to construct your own card, either through a design you can upload or by using our custom online software.
3. Some of the card templates available have many picture slots. In these particular templates, all slots must be filled with a picture in order to advance to the next step. If you really want an empty frame, the only way to achieve this is to upload a small white jpeg image.

For best uploading results we recommend using the latest version of Java. We will e-mail you before printing if we have any questions about your order or in response to any questions or directions from you. Anytime you want to talk to us, call 503-223-1328 in the Portland, OR metro area or dial 877-223-6364. More products will be coming soon including additional card templates and calendars.
